

Cartridge Roller

The cartridge rolling machine is an accessory to be placed in line at the output of the automatic filling machine, for rolling the cartridges during the ink-jet printing of the batch number and the expiry date.

Each model has **3 possible positions** for the ink-jet marking head, so that the customer can choose where to mark the cartridge.

Mod. GR

Totally **pneumatic** for a production speed of up to 40 cartridges/minute.

Mod. GRI

High performance **electric** for a production speed of up to 100 cartridges/minute.

Mod. GRE

Equipped with **electric motor** for a production speed of up to 55 cartridges/minute.

Mod. GRE-E

Like mod. GRE, but in addition, **provided with labeling head** for labelling the cartridges with **small labels** (up to 70 x 50 mm), and **mark recognition sensor** for labeling the cartridge always in the specific space. Production speed up to 35 cartridges/minute.
